

SUMMARY

A highly motivated Computer Engineering student with a passion for mobile app development using Flutter. Strong foundation in competitive programming, problem-solving, and Python frameworks. Seeking opportunities to leverage skills in Flutter and full-stack development to build scalable applications.

PROFILES

www.linkedin.com/in/piyush-chunara

www.geeksforgeeks.org/user/chunarapnn90/

SKILLS

Language : Python, Java, Dart, C++, SQL

Frameworks : Flutter, Flask, Pandas, Seaborn, Scikit-learn

Tools : Excel, PowerPoint, Mysql

Platforms : Jupyter Notebook, Visual Studio Code

Soft Skills : Problem Solving, Time Management, Critical Thinking

EDUCATION

G H Patel College of Engineering & Technology

Bachelor in Computer Engineering - CGPA : 8.75

Dec 2022 - Aug 2026

Gujarat, India

St. Xavier's High School, Khambhat

Board: GSEB Percentage: 85.33% (PCM)

2022

Gujarat, India

PROJECTS

Laptop Price Prediction using Machine Learning

- Built a **regression model** with **Python, Pandas, and Scikit-learn** to predict laptop prices.
- Performed **EDA, feature scaling, and categorical encoding** for model preparation.
- Tested **multiple models** and **Voting Regressor and Stacking** of best models for best results.
- Deployed the model using **Flask** to create a simple **web-based UI** for predictions.

Car Recommendation System

- Built a **machine learning-based recommendation system** to suggest cars based on user preferences.
- Processed and analyse car data using **Python, Pandas, Seaborn and Scikit-learn**.
- Developed a **Flask API** to serve recommendations to the front end.
- Implemented **data visualization** to display insights on car features and pricing.

Task Manager — Flutter Mobile App

- Developed a **task management app** using **Flutter and Firebase**.
- Implemented **user authentication** with Firebase Authentication.
- Used **Cloud Firestore** to store tasks with real-time update.
- Added **task categories, due dates, and reminders** better organization-
- Integrated **state management using Provider** for efficient UI updates.

Real-time Chat Application — Flutter & Firebase

- Developed a **cross-platform** real-time chat app using **Flutter and Firebase**.
- Implemented **Firestore Authentication** for user login, signup, and logout.
- Integrated **Cloud Firestore** for real-time messaging and **data storage**.
- Enabled **dark mode** and built a **clean, responsive UI** with **custom theming**.
- Used **Provider** for efficient **state management** and **reactive UI updates**.
